

Paneling Templates

Tips:

1. Don't cut all of the pieces apart. Leave each full rectangle together (even the "Waste" panels), but use a knife to carefully cut out a line- or cross-shaped hole at each corner. This will let you mark through the template with a pencil at all of the key points.

2. The pieces in the main template at left are mismatched to reduce craft foam waste. Windows go on top of the flat bottom; vent bumps go with the flat top.

3. A bunch of the Door Face below will get cut off to match your specific terrain piece. I sized mine to allow tabs over the doors.

Consult the blog writeup for more specific tips and pictures of the final product: <http://www.captainspud.com/?p=2047>

Have fun, and don't forget to send me pictures. :)
